

A wide-angle photograph of a modern architectural space, likely a lobby or atrium of a corporate building. The space features multiple levels connected by curved walkways and stairs with glass railings. The ceiling is high and curved, with recessed lighting. The overall aesthetic is clean, bright, and contemporary.

Solution Design

Reusable Components Approach

 Local File Storage	 Shared File Storage	 Shared Components Package	 Custom Packaging Method
<p>Store the reusable components in the Source Control System. Sync files in shared location. Add the network path to the Library in Studio.(RECOMMENDED).</p>	<p>Use a file share location to store the reusable components and invoke them remotely.</p>	<p>Create one package containing shared components and distribute it using the Orchestrator embedded provisioning mechanism.</p>	<p>Use a third party solution to create packages that also provision the reusable components.</p>
<p>PROS:</p> <ul style="list-style-type: none"> ✓ Easiest to implement ✓ Most secure <p>CONS:</p> <ul style="list-style-type: none"> ▪ In case a reusable needs to be changed, manual re-publishing and re-deploying are required 	<p>PROS:</p> <ul style="list-style-type: none"> ✓ Easy to implement ✓ Calling by reference <p>CONS:</p> <ul style="list-style-type: none"> ▪ In case of network failure, the robots are not able to run ▪ The robots can run more slowly due to network latency (or even trigger exceptions) ▪ Security risk (access to shared folder) 	<p>PROS:</p> <ul style="list-style-type: none"> ✓ Calling by reference ✓ Version control <p>CONS:</p> <ul style="list-style-type: none"> ▪ Harder to implement ▪ Project path needs configuration 	<p>PROS:</p> <ul style="list-style-type: none"> ✓ An alternative to the Shared Components approach <p>CONS:</p> <ul style="list-style-type: none"> ▪ The most complex approach and the hardest to implement and maintain ▪ Dependent on third party components

Basic steps for each Application

Process Scheduling

Robot 1
Dispatcher

Robot
2,3,4,5,6

Robot
7,8,9,10,11

Robot 2,3,4,5,6
(can be scaled to
any multiple of 5)

Robot 1

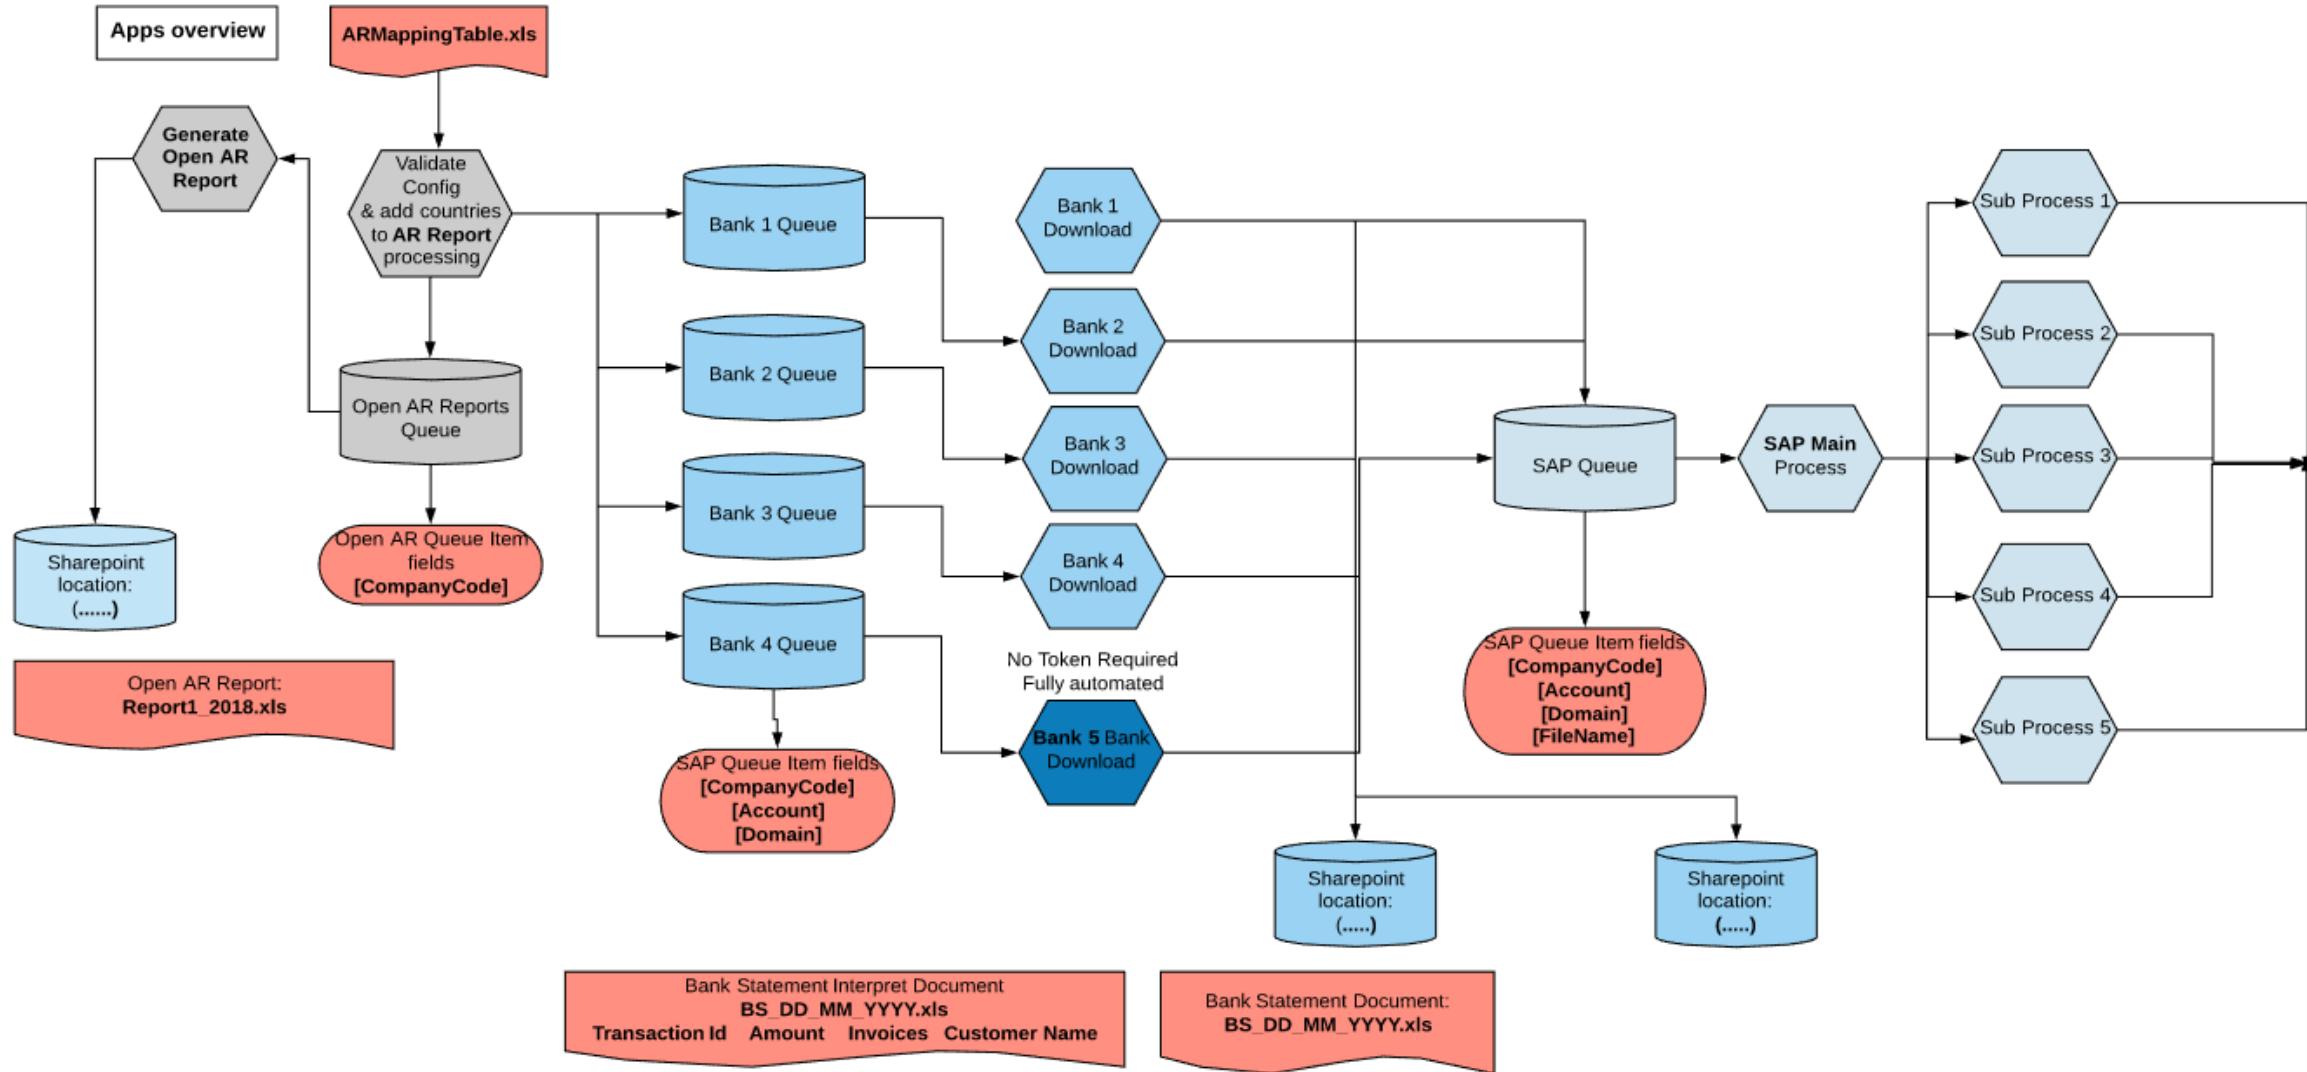

Robot
7,8,9,10,11

Robot 1

Robot 12

Robot 13
(can be scaled to
any number)

Overall Solution Diagram – Example 2

Attended vs Unattended in solution design

- Front office processes can make use of back office processing
- Data sync between processes using Orchestrator queues

Attended

Unattended

BENEFITS

- 1 Fast execution for the Attended robot
- 2 Scalable

Thank You!
